Response to Amendment

A Quale action was issued in this case on 10/20/2006. the only procedural issue was cancellation of non-elected with traverse claims 27-51.

Applicants by papers filed on 2/20/2007 have cancelled the non-elected claims 27-51.

Allowable Subject Matter

Claims 1-26 are allowed.

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitation of the dependent claims, in such manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The applied prior art fails to teach a combination of all the claimed steps/features as presented in independent claims which include the combination of an imaging device elements as recited in these claims including a plurality of pixel elements where in each pixel element includes complementary first and second -type modulation doped quantum well interface that are formed in a resonant cavity on a substrate and spaced apart from each other and is capable of receiving an electro magnetic radiation in a given predetermined wavelength range at the first the pixel element to inject it into the cavity and the charge generated by the injection of radiation in the resonant cavity is collected at the interface of the second type modulation doped quantum well with the pixel element.
